Hi Will,

I looked at the radon spreadsheet from Vivian and there are three homesites listed with elevated readings above 4 pCi/L. They are [REDACTED] at BH-18, [REDACTED] at BH-01, and the third [REDACTED], who I could not find in the associated homesite packet for. BH-18 and BH-01 did not have elevated PIC readings or elevated 3x3 readings. It looks like the radon spreadsheet is not complete with all the Haystack homesites and that we can expect more radon data as they collect it. So, I would keep the three homesites with elevated 3x3 readings, BH-38C, BH-42A, and BH-19D, on the list for now until we can be sure there is associated radon data with these homesites.

Regards,

Craig Tiballi
